Textbooks

Propulsion

Rocket Propulsion Elements, G. P. Sutton, O. Biblarz, 8th edition, John Wiley & Sons (2010)

Rocket and Spacecraft Propulsion, M.J.L. Turner, Spinger – Praxis Publishing Ltd, Chichester, UK (2009)

Space Mission Analysis and Design, W. J. Larson and J. R. Wertz, Space Technology Library, Microcosm, 3rd edition (1999)

Frontiers of Propulsion Science, Ed. by M.G. Millis and E.W. Davis, Progress in Astronautics and Aeronautics, vol. 227, AIAA Inc. (2009)

Electric Propulsion

Physics of Electric Propulsion, R.G. Jahn, McGraw-Hill, Inc. (1968)

Fundamentals of Electric Propulsion, D.M. Goebel and I. Katz, John Wiley Sons, Inc., New York (2008)

Plasma physics

Physique des Plasmas, J.M. Rax, Dunod, Paris (2005)

Introduction to Plasma Physics and Controlled Fusion, F.F. Chen, Plenum Press, New York (1984)

Principles of Plasma Discharges and Materials Processing, M. A. Lieberman and A. J. Lichtenberg, John Wiley Sons, Inc., New York (1994)

Basic Space Plasma Physics, W. Baumjohann and R. A. Treumann, Imperial College Press, London (1996)

Articles

Electric Propulsion

Electric propulsion for satellites and spacecraft: established technologies and novel approaches, S. Mazouffre, Plasma Sources Sci. Technol. 25, 033002 (2016)

Advanced space propulsion for the 21st century, R. H. Frisbee, J. Propulsion Power 19, pp. 1129–1154 (2003)

Spacecraft electric propulsion — An overview, M. Martinez-Sanchez and J. E. Pollard, J. Propulsion Power 14, pp. 688-699 (1998)

Electric propulsion: comparisons between different concepts, L. Garrigues and P. Coche, Plasma Phys. Control. Fusion 53, 124011 (2011)

Plasmas for space propulsion, E. Ahedo, Plasma Phys. Control. Fusion 53 124037 (2011)

Plasmas for spacecraft propulsion, C. Charles, J. Phys. D: Appl. Phys. 42, 163001 (2009)

New dawn for electric rockets, E. Choueiri, Scientific American, pp. 58–65 (February 2009)

A critical history of electric propulsion: The first 50 years (1906–1956), E. Choueiri, J. Propulsion Power 20, pp. 193–203 (2004)

Micropropulsion

Micropropulsion for small spacecraft, M. M. Micci and A. D. Ketsdever, Progress in Astronautics and Aeronautics, AIAA Inc. (2000)

Electric micropropulsion systems, W.P. Wright and P. Ferrer, Progress in Aerospace Sciences 74, 48–61 (2015)

Space micropropulsion systems for Cubesats and small satellites: From proximate targets to furthermost frontiers, I. Levchenko et al, Appl. Phys. Rev. 5, 011104 (2018)

Space propulsion technology for small spacecraft, D. Krejci, P. Lozano, Proceedings of the IEEE 106, pp. 362–378 (2018)

Gridded ion engines

Plasma-based ion beam sources, H. Loeb, Plasma Phys. Control. Fusion 47 pp. B565–B576 (2005)

Global model of a gridded-ion thruster powered by a radiofrequency inductive coil, P. Chabert, J. Arancibia Monreal, J. Bredin, L. Popelier, A. Aanesland, Phys. Plasmas 19, 073512 (2012)

Ion production cost of a gridded helicon ion thruster, L. T. Williams and M. L. R. Walker, Plasma Sources Sci. Technol. 22, 055019 (2013)

PEGASES – A new promising electric propulsion concept, A. Aanesland, S. Mazouffre, P. Chabert, EuroPhysics News 42, pp. 28-32 (2011)

Hall thrusters

Physics and modeling of Hall thrusters, J-P. Bœuf, J. Appl. Phys. 121, 011101 (2017)

Physics of closed drift thrusters, V. V. Zhurin, H. R. Kaufman and R. S. Robinson, Plasma Sources Sci. Technol. 8 pp. R1–R20 (1999)

Wall material effects in stationary plasma thrusters. I. Parametric studies of an SPT-100, N. Gascon, M. Dudeck, S. Barral, Phys. Plasmas 10, pp. 4123–4136 (2003)

Elementary scaling relations for Hall effect thrusters, K. Dannenmayer and S. Mazouffre, J. Propulsion Power 27, 236–245 (2011)

Main physical features and processes determining the performance of stationary plasma thrusters, V. Kim, J. Propulsion Power 14, pp. 736–743 (1998)

Energetics of propellant options for high-power Hall thrusters, A. Kieckhafer and L. B. King, J. Propulsion Power 23, pp. 21–26 (2007)
